

Eduardo López

Founder and full stack AI engineer

hello@eduardo-lopez.com +34 637 432 670 eduardo-lopez.com

Building startup products since 2015. Cofounded amiloz (over USD 3.5 million raised), a Y Combinator W22 company. As CTO, I built the first version of every product, then hired a team to continue the work. Now building Supervisor and Constructor, software to help SMBs run better using AI.

SELECTED EXPERIENCE

Supervisor | Founder

 Jul 2023 to present

Work spans product design, web and mobile interfaces, integrations, and agent workflows for questions, monitoring, and scheduled actions.

Building Constructor, a companion product for creating applications from a description.

amiloz | Cofounder & CTO

Jul 2021 to Dec 2022

Built the first API, website, and iOS, Android, and web apps for customers, warehouses, and deliveries before fundraising.

We raised more than USD 3.5 million. I hired and led a technology team of seven in a company of 80 people.

Nixtla | Head of Web

Present

Created the first API serving TimeGPT, the developer dashboard, and the website.

Own monitoring tools, analytics, HubSpot integrations, and internal AI products.

freelance | Software consultant for startups

Jan 2018 to present

Built Selia's first iOS, Android, and web apps, including booking, payments, and video consultations.

Built MarketPryce's iOS app, designed Ciro in Figma, and led CervezaSiempre for AB InBev.

EARLIER EXPERIENCE

 Betterfin (2019 to 2021). Front end software engineer. Built the frontend for a business financial insights and lending platform.

 Zeel (2018 to 2019). Full stack developer. Built internal software for tracking orders and operational issues.

 Eiya (2016 to 2017). Lead engineer. Built iOS, Android, and web apps for delivery drivers, internal operations, and customers.

 Rappi (2016). Full Stack Developer. First in house developer in Mexico. Built internal software for operations and customer service.

 Centraal (2015 to 2016). Junior full stack developer. Built an internal ERP for coworking operations and the website.

TOOLS & BACKGROUND

JavaScript · TypeScript · React · Next.js · Vue · Node.js · Python · Django · SQL · PostgreSQL · Firebase · Capacitor · Git · Figma

Y Combinator W22 · Platanus Ventures 2023 · Dev.F 2015 · Spanish and English

Experience in detail

amiloz

Cofounder & CTO

From the first apps to the engineering team

Before we raised funding, I built the software myself: the API, website, and iOS, Android, and web applications for customers, warehouse teams, and delivery drivers. My remit also covered internal tools and analytics.

We went through Y Combinator W22, raised a little over USD 3.5 million during my time there, and served hundreds of business customers. The company reached 80 employees, including the technology team of seven that I hired and led.

The next direction

I wanted to focus fully on AI, while my cofounders wanted to pivot toward lending. We agreed on a founder separation that included a small personal exit. The company now operates as BelozFi.

Nixtla

Head of Web

The first web engineer

As of October 2026, I had worked at Nixtla for a little over three years. I was the first web engineer and, for most of that time, the only person in that role. I continue as Head of Web.

TimeGPT and the developer experience

I created the first API serving the initial TimeGPT model, along with the developer dashboard and website. This covered the web products and interfaces through which developers accessed the forecasting service.

Monitoring, analytics, and internal products

I built monitoring tools and took responsibility for analytics and HubSpot integrations. My remit also includes several internal AI products that have not been publicly released.

freelance

Software consultant for startups

Selia

Built the complete first version for therapists and patients across iOS, Android, and web. It included therapist discovery, connecting patients with therapists, booking, payments, and video sessions inside the app.

MarketPryce

Built the iOS app for discovering and connecting with sports influencers, including matching. That app is no longer in use.

Founder and full stack AI engineer

freelance · continued

Ciro

Redesigned the whole product in Figma. This engagement was entirely product design and did not include writing code.

CervezaSiempre for AB InBev

Led development of a beer subscription service for AB InBev. We launched in about a month and a half and reached thousands of customers over the following month and a half.

It was planned as a short engagement. After completing it, I moved to the role at Betterfin that I had already arranged.

Eiya

Lead engineer

Delivery products and team

My work covered the delivery apps, fleet tools, customer dashboards, and internal operations across iOS, Android, and web. I also managed a small engineering and design team.
